DETAILED ACTION

Drawings

The drawings are objected to because the figure includes unlabeled blocks. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 1 and 18 are objected to because of the following informalities: In claims 1 and 18, lines 9 and 7 respectively, there appears to be a word/words missing after "one". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2, 5, 9-13, 17, and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 2 and 19, "the data transmitted" lacks antecedence. It is unclear whether this refers to the data exchanged or the signal (malfunction) transmitted.

In claim 5, "the operational data" in line 5, "the scanning operation" in lines 16-17, and "the injection" in line 17 lack antecedence.

In claim 9, "the scanning operation" in line 3 and "the injection" in lines 3-4 lack antecedence.

In claim 10, line 8, "the operation" lacks antecedence.

In claims 11, 12, and 13, "the operational data" in lines 4, "the scanning operation" in lines 12-13, and "the injection" in lines 13 lack antecedence.

In claim 17, lines 2-3, "the scanning operation" and "the injection" lack antecedence.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Uber, III et al (US Pub 2002/0165445 –cited by applicant).

Re claims 1, 2, 8-10, 16-19: Uber, III et al disclose a system and method for data exchange between a CT imaging device and an injector 40 [paragraph 0039, 0048] wherein the data exchange is mutual relating to their respective operating states via a data interface 90 (figure 1). The exchange between the devices is standardized and may be unidirectional or bidirectional and a malfunction occurring during operation is transmitted [0018], whereby a decision is made automatically using a termination rule as to whether the operation of the imager or the injector is expedient [0018, 0019, 0065]. Such is used as a basis to control the operation of either the imager or the injector. Consequently, the malfunction may be an operating parameter and a termination rule is defined by the logic of the control parameter or specific data protocol [0065].

Re claim 3, 4, 20, 21: An operational readiness may be checked before starting to operate, wherein operation is suppressed if the other is not ready (i.e. start/stop/hold/reset/preparation commands) [0065].

Re claim 5, 11-13: The decision parameters may be input manually [0065].

Re claims 6, 7, 14, 15: The operational data is entered and displayed at an operator interface 150 which is a common operating console [0063].
